in your home, lowering your heating
and cooling bills, and reducing your
home's impact on the environment!
Invest in your home, your comfort,
and your future - install an Arzel
zoning system today!*

For more information or to have a system installed contact your professional zoning contractor today!

What is Zoning?

Zoning is the controlled delivery of heating and cooling to different areas (zones) in your home or business as desired, making you more comfortable. Whether it's an existing building or new construction, zoning is the solution to your comfort problems. A zone could be a single room, a group of rooms or even individual floors within a house or building and Arzel's zoning systems work seamlessly with most HVAC equipment.

Why Buy Arzel® Zoning?

Eliminate the use of expensive, energy consuming, and potentially dangerous portable heaters, fans, window air conditioners, mini splits and only heat and cool the rooms you use. You no longer have to raise and lower the thermostat setting in one room to keep from baking or freezing in another. With an Arzel zoning system, you can be rid of hot or cold spots!

Lifetime Parts Warranty

Arzel Zoning Technology, Inc. is the only zoning company that backs its zoning systems with a lifetime warranty.

Quiet Performance

Arzel Zoning systems feature motor-less, air-driven dampers, which are not only quiet but reliable too.

Save Money & Energy

Arzel systems give you the flexibility to turning off parts of your comfort system to avoid heating or cooling unoccupied rooms. Increase energy efficiency, reduce maintenance and equipment costs, and increase the return on your investment.

Easy Installation

Arzel Zoning systems can typically be installed in less than one day with no inconvenience or mess. Even if your duct work is covered, Arzel® Zoning offers dampers that can be installed without cutting into finished drywall.

Universal Compatibility

Arzel Zoning systems will work with any standard system and is perfect for all retrofit applications. Arzel Zoning also offers custom fit dampers to accommodate most duct work sizes and configurations.
